

## **Escort App**

### **Project Overview**

We are looking to build a single page application progressive web app that will allow independent advertisers (escorts) to create a profile and advertise their services. Users will not have to register to search, filter and view profiles. If a user would like to message an advertiser they will need to create an account. User accounts are free or paid. A paid account will allow users to view advertisers' explicit photos.

### **Competitors**

The app will incorporate elements from our competitor site and features will closely match.

<http://rent.men>

### **Development**

- Single Page application
- Built using Laravel backend and Inertia.js
- Frontend built in React
- Styles using TailwindCss
- Admin Panel will be Laravel Nova
- Twillo

### **Sign Up / Registration**

- Client and Advertiser registration will be on the same form initially the form will collect username and email.
- Username and email will be live validated if the email is already registered and give the user the option to request a new password.
- After the email is validated and the user is logged in both client and advertisers will be given the option to create a profile which they can skip.
- Both client and advertiser will have the option to pay and upgrade their profile.
- Advertiser profiles will required the user to upload ID
- Advertiser profiles will require phone number verification.

## **Homepage**

- When you first visit the homepage it will display advertisers from your local area or the area previously selected in the search. (location can be pulled from ip or cookie)
- The homepage will show advertisers, digital advertisers, premium, platinum and gold profiles from the area, advertiser videos, and live cams (provided by third party)

## **Search**

- Users will be able to search profiles by location
- Users will be able to filter profiles by any data on the user profile age, weight, height, tag etc..

## **Dashboard**

- All dashboards will allow the user to update profile / upload photos / change location.
- Advertiser dashboard will also allow the user to add travel details and dates.
- Will be different depending on the type of user.
- Advertiser dashboard will allow additional info to be added such as rates \$.
- Advertiser dashboard will also show statistics profile visits etc.
- Dashboard will allow photos / videos to be uploaded and the user to select either public, private or premium.

## **Profile**

- Display the location of the advertiser/user.
- Profile details provided by the user height/weight/age etc...
- Display uploaded photos / videos.
- Private photos will be blurred and not shown without the profile owners permission.
- Premium photos will only be shown to clients who have a paid account.
- Allow a client to instant message or call an advertiser
- Display the advertisers phone number.
- Allow the user to favorite the profile.
- Allow a user to write a review about the advertiser.
- Profile will display if the user is gold premium platinum etc.

- Profile will display if the users photos have been verified.

### **Messenger Key Features**

- Instant messaging communication between users.
- Voice and video communication using WebRTC.
- Send and receive media (video, photos, voice)
- Message delivered and read notification
- Ability to send Emoticons
- Ability to send Location
- If the user is an advertiser and their membership has expired they can still receive messages but they will be unable to reply without renewing their membership.
- User should be able to pin messages, delete & block.
- If a user has received a message from a user that has subsequently blocked them they can still see the message but the senders name and photo will be blank and they will not be allowed to reply.
- User will be able to search other users by their username to message.
- Users will have access to a setting page where they can disable incoming calls & email notifications.
- If a user is not online and they receive a message they will get an email notification.

### **Videos**

- Videos page will display uploaded videos from advertisers from the local area.
- Only upgraded user accounts will be able to view premium videos.
